

having the longitudinal stripe slightly thicker, and in addition, that *Coccinella religiosa* Lea, 1901 is a synonym of *Coelophora inaequalis* var. *novemmaculata* (F.). Timberlake (1922) reared an all-black variety of *C. inaequalis*; this suggests that the black species *C. mastersi* Blackburn, 1892 may also be a synonym of *C. inaequalis*.

*Coelophora inaequalis* is widely distributed in Australia and Asia, and has been imported into Hawaii. Specimens in the Australian Museum and Australian National Insect Collection indicate that *C. inaequalis* var. *veranioides* occurs throughout the coast and mountain regions of eastern Australia.

The inheritance of the elytral pattern of *C. inaequalis* var. *veranioides* is described elsewhere (Hales, 1976).

### Acknowledgements

I am grateful to Dr E. B. Britton for help he has given me in this study and to Betty Thorn who drew the figures.

## AN ACCUMULATIVE BIBLIOGRAPHY OF AUSTRALIAN ENTOMOLOGY

Compiled by M. S. Moulds  
14 Chisholm St, Greenwich, N.S.W. 2065, Australia

This bibliography lists, in an accumulative manner, all literature published since the beginning of 1972 that directly concerns Australian insects. It attempts to fulfil the need for a comprehensive list of current Australian entomological literature. If you have published anything likely to be overlooked I would be grateful for reprints or details of such publications.
